Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Fresh team
Project / Solution Name	PivotPath AI
Name (Leader)	CHEN YANG
Email & Phone (Leader)	cylk080722@gmail.com 1117855162
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://replit-design-project--lilya8047.replit.app/roadmap
Code Repository URL (public / access granted to judges)	https://github.com/Jy8047/Replit-Design-Project.git

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

The solution is a web-based career pathway application running as a Single Page Application (SPA). The frontend is built with React and TypeScript, using Wouter for client-side routing to navigate to the "Roadmap" module. The core logic (weekly plans, progress tracking, resources) is handled via isolated TypeScript modules (src/lib/) using hardcoded/static data. User profile information and roadmap progress are persisted locally using localStorage. Additionally, the app communicates with its own internal backend API to extract data from user-uploaded PDF resumes. The application is hosted on Replit.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
TypeScript(~5.9.3)	Primary programing language for type-safe logic and data structures.	Apache-2.0
React(19.1.0)	Fronted UI framework for building interactive components.	MIT
Tailwind CSS(^4.3.3)	Utility-first CSS framework for styling and responsive design.	MIT
Wouter(^3.3.5)	Minimalist client-side routing (e.g., navigating to the /roadmap page).	MIT
pnpm(workspace)	Package manager for managing monorepo workspace dependencies.	MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
None	No third-party external APIs are used.	N/A

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Cloud IDE and hosting platform for deploying the prototype.	Free/Default

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None	N/A	No AI models are embedded in the running application.	N/A

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
O*NET Database	https://www.onetcenter.org/	public	CC BY 4.0	N
Project Career/Scenario Data	Self-collected/Gennerated	Self-collected	N/A	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Replit AI Agent	Code generation, refactoring UI, writing type definitions, and debugging.	Major
LLM Chat Assistants (ChatGPT/Claude/Google Gemini)	Architecture consulting, troubleshooting, drafting project documentation, and i18n translation.	Moderate

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

The team strictly reviewed all AI-generated outputs. We manually verified data structures in src/lib/, validated code logic, and ran typechecks after modifications. AI was used purely as a productivity aid; architectural decisions, documentation accuracy, and final code integrity were fully verified by human developers. We take full responsibility for the output.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Sdc-xmuhack	Replit core subscription (voucher)	Provided the necessary cloud compute, AI Agent features, and hosting environment for the team to develop and deploy the live prototype.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Yes, the Replit Core voucher was essential for our development phase. It provided the necessary cloud compute and AI agent capabilities to build the prototype efficiently. However, the final generated code is platform-agnostic and could theoretically be deployed to alternative cloud providers (e.g., Vercel or AWS) if needed.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

Our application does not transmit or store personally identifiable information (PII) on external servers. We collect optional profile data (education, skills, interests; name is optional, no email required) and roadmap progress. All user data is stored strictly locally on the user's browser using localStorage and sessionStorage. Uploaded PDFs for data extraction are processed via our internal API and are not saved or shared with third parties. Users can clear their browser cache to delete all data.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Limitations: Data is tied to a single browser via local storage (no cross-device sync). The roadmap data and career paths are currently static TypeScript definitions, requiring manual code updates for changes. PDF extraction accuracy may vary depending on file formatting.
Mitigation: The static approach ensures high reliability and zero latency. We clearly inform users that data is stored locally. Future iterations will include a secure database and user authentication for cross-device syncing and dynamic data updates.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.

☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.

☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.

☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.

☑ Any use of official SDC sponsor resources has been declared in Section 5.

☑ The prototype described here is accessible to judges through the links provided in Section 1.

☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
